I asked CDC to send some environmental health support a couple weeks ago and Troy was one of several they sent. He worked with the CDC situational awareness folks that we have been coordinating with on Red Sky to produce the attached. I have asked Troy to serve as the Project Manager for the well water issues.

Following today's conversations, overall public and private well effort is being more tightly controlled and we have formed a workgroup including DSHS, TDEM, TCEQ, EPA, CDC, and FEMA. The FEMA rep said today that they will cover all costs for testing and restoring public and private systems. DSHS is not the lead but will represent the public health consequence management of the well water issue. More to come.

Good Afternoon,

The attached file provides an overview of inundated wells in the impacted counties. I sent a previous email that included a second "huge" file with detailed maps of each county but that one bounced back from all DSHS addresses. Crossing fingers this one makes it. I can provide the detailed maps via hard copy.
